

## Southeastern Laboratories, Inc.

Total Water and Waste Water Treatment - Services and Products  
P.O. Box 10189, Goldsboro, North Carolina, 27532-0189

### WASTE TREATMENT DIVISION

Southeastern Laboratories, Inc. is proud to introduce its complete line of water and wastewater treatment products and services. As a company devoted to environmental protection, Southeastern's staff of qualified professionals are prepared to provide you with the products and technology you need to treat your specific waste treatment condition. Our product line is second to none in that each product has been screened and chosen for a specific application. Each has been field tested to prove its effectiveness in "real world" conditions.

The **SELfloc Product Line** consists of inorganic coagulants and their blends, organic coagulants, and flocculants in dry, liquid and emulsified forms. These products are specially formulated for their specific application to sludge dewatering, effluent clarification, paint detackification, or the removal of various waste stream contaminants (CODs, metals, etc).

**SELfloc's "GRAS" Products** include a group of flocculants specifically manufactured for the food processing industry. These products are Generally Recognized As Safe by experts in accordance with the Federal Food, Drug and Cosmetic Act (CFR-570.30 section 201s) in their intended use as flocculants and dewatering aids for food processing waste destined for use as an animal feed.

**Southeastern's Professional Staff** includes individuals with extensive experience in water and waste water treatment. Our core technical group consists of degreed chemists, engineers, and biologists, experienced in the operation of water and waste treatment plants. Staff credentials additionally include operator licenses in varying waste treatment capacities.

**Sybron & Biosystem "BUGS" - Selectively Adaptive Microorganisms**, are an important part of our SELfloc Line. Understanding that waste treatment solutions are not always limited to chemical treatments, these products allow us the flexibility to prescribe a chemical or biological solution to your specific set of circumstances. Our ability to truly offer a full and multiple line of waste treatment programs sets us apart from our competitors.

**Martin Marietta's Magnesium Hydroxide** is a special Distributor product in our line that finds utility in many waste treatment applications. This safe to handle alkalinity replacement offers economic as well as performance benefits for both municipal and industrial users.

**Committed to Quality and Integrity**, we would appreciate the opportunity to meet with you and discuss the many programs we have to offer. We believe you will find our step-by-step, diagnostic approach to solving waste treatment problems valuable in determining the most effective and economic solution to your needs.

To obtain further information or schedule an on-site evaluation, please call our Goldsboro, N.C. office at (919) 751-1001, contact a **Sales Representative** at [Sales@SELaboratories.com](mailto:Sales@SELaboratories.com), or visit us at [www.SELaboratories.com](http://www.SELaboratories.com).
